

iwis solutions for logistics and conveyors

Rapidly advancing globalisation, shorter product lifecycles and the demand for fast availability of goods are issues that present the logistics industry, and many other sectors besides, with new challenges. iwis antriebssysteme fulfils high quality demands and provides expert service to convince even the most exacting customers. After all, the only way to move the world is to work together!

High quality and high reliability

Conveyor technology is a special branch of the mechanical engineering industry that deals with the design, configuration, planning and implementation of systems for the movement of unit loads (pallets, boxes, parcels etc.) or bulk goods. In most cases, separation or buffering of the conveyed goods is also required. Conveyors are frequently in-house transportation systems integrated into assembly lines of all kinds.

Logistics is an umbrella term for transportation, warehousing and order-picking systems that, in turn, support the overall flow of materials within a variety of different processes.

A wide range of drive chain systems are used in all of the above areas, all of which involve extremely stringent demands on chain characteristics such as surface finish, tolerances, tensile strength, fatigue strength, lubrication (or absence of lubricant) and reproducibility.

iwis is committed to producing chains of the highest quality and has implemented a comprehensive range of quality assurance measures to achieve this.

iwis leaf chains comply fully with
EC Machine Directive 2006/42/EC

Highlights

- Partner for development and engineering
- Highest constant quality and precision
- Best cost-performance ratio
- Large number of iwis Group locations for global presence
- Cost-effective production in various countries

iwis antriebssysteme regards itself as a **development partner** and technology leader who can help you to meet the challenges facing you. State-of-the-art **simulation and configuration tools developed in-house** help our design engineers to decide on the right products at an early stage.
